DSA-Exercise-7(Forecast)

The screenshot displays the Eclipse IDE interface. The Package Explorer on the left shows the project structure, including the 'FinancialForecasting' package and its 'src' directory. The main editor window shows the 'FinancialForecast.java' file with the following code:

```
1 public class FinancialForecast {
2
3
4     public static double futureValue(double presentValue, double growthRate, int years) {
5         if (years == 0) {
6             return presentValue;
7         }
8         return futureValue(presentValue * (1 + growthRate), growthRate, years - 1);
9     }
10
11     public static void main(String[] args) {
12
13         double presentValue = 10000;
14         double growthRate = 0.10;
15         int years = 5;
16
17         double result = futureValue(presentValue, growthRate, years);
18
19         System.out.println("Present Value: " + presentValue);
20         System.out.println("Growth Rate: " + (growthRate * 100) + "%");
21         System.out.println("Years: " + years);
22         System.out.printf("Future Value: %.2f", result);
23     }
24 }
25
26 }
```

The Outline view on the right shows the class structure, including the 'futureValue' method and the 'main' method. The Console view at the bottom shows the output of the program:

```
<terminated> FinancialForecast [Java Application] C:\Users\chenn\p2\pooth\plugins\org.eclipse.justj.openjdk.hotspot.jre.full.win32.x86_64_17.0.10.v20240120-1143\jre\bin\javaw.exe
Present Value: 10000.0
Growth Rate: 10.0%
Years: 5
Future Value: 16105.10
```
